

Nearly twenty years. One principle: Don't deliver and leave. Hand over the code. Train the people. Stay — until they don't need you anymore.
That's why CUPIA is not a mere technology vendor. That's why eleven countries have chosen us. And will choose us again.

WWW.UNIPASS.OR.KR

When governments collect
better,
People *live* better.

Every year, *trillions of dollars* stop at the border.

It's neither a crisis nor a conflict; it's the paperwork.

Beyond the frustration of long lines and red tape lies a deeper cost: the loss of national revenue.

Fairer collection, smarter spending.

Toward a world of fully digital revenue administration
—**CUPIA** unlocks this future through technology.

Twenty years abroad

In 2006, Korea's customs system crossed its first border. The country: Dominican Republic. The vehicle: CUPIA.

We arrived in a small Caribbean nation. We identified the gaps and recognized the unique realities facing each country.

In 2008, we started operating UNI-PASS. We have identified critical bottlenecks and determined the most effective functional upgrades. These practical, on-the-ground experiences are now the cornerstone of our global expansion, combining design innovation with practical operational expertise

In 2010, Guatemala adopted UNI-PASS.

Ecuador soon joined, followed by Tanzania in 2012.

Meanwhile in Korea, the 4th-generation UNI-PASS upgrade commenced, with CUPIA personnel playing a pivotal role. Knowledge doesn't move through documents. It moves through the people who earned it.

In Ethiopia, clearing a shipment used to take thirty days. In 2020, it took only 2.5. The full story is on the next page.

In Cameroon, revenue grew 70%. Not because the laws changed. Because for the first time, anyone could see where the revenue was going.

2023, Tanzania sought out CUPIA once again.

Ten years later. Same partner.

A broader vision realized: through brand new TANCIS & IDRAS system — unifying the entire national tax administration into one centralized platform for complete, end-to-end control.

TANCIS launched November 2025. IDRAS goes live in 2026. We're still in the same workspace with our client.

Nearly twenty years. One principle: Don't deliver and leave. Hand over the code. Train the people. Stay — until they don't need you anymore.

That's why CUPIA is not a mere technology vendor. That's why eleven countries have chosen us. And will choose us again.

CLEARANCE TIME · 92% REDUCTION

Before
When regulations changed, officials waited for developers.

Now
with Dynamic Form, a few clicks to reconfigure the changes.
with Dynamic Workflow, they reorder the processing sequence.
No coding. No delay

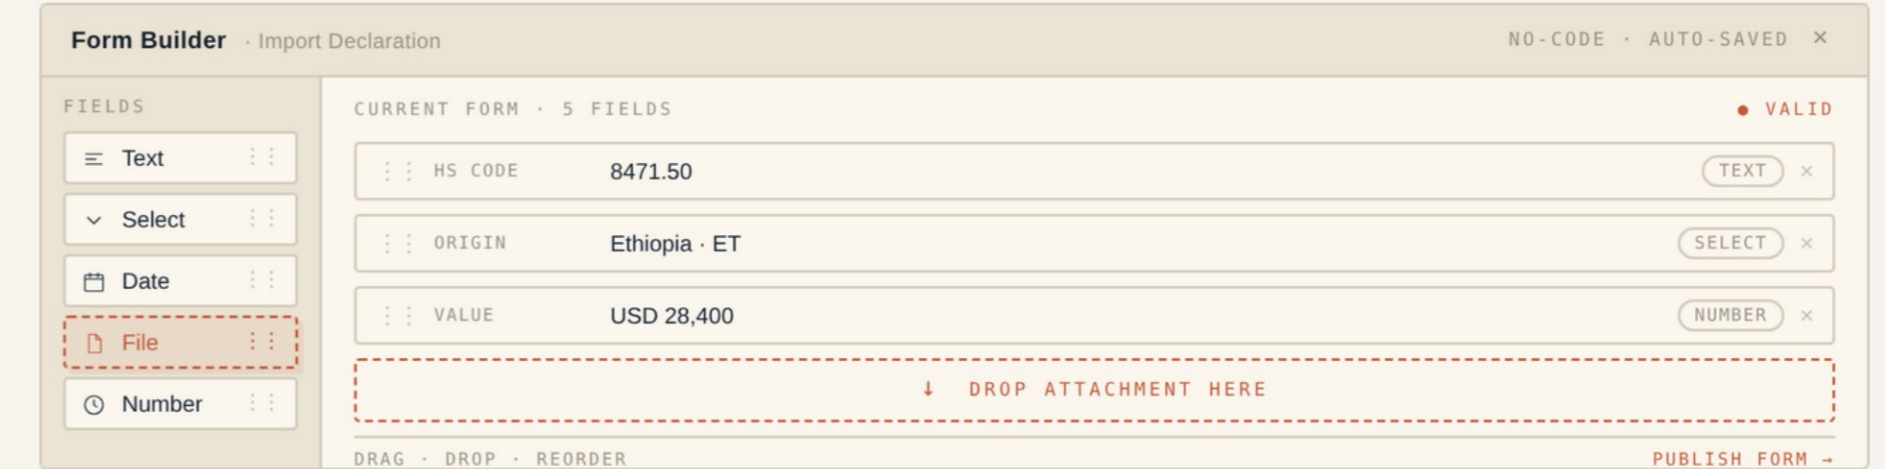

The institution evolves. The system follows.

KEY FEATURES

01 Dynamic Form	02 Source Code Transfer
03 100% Paperless	04 Risk Management
05 Joint Inspection	06 Fee Payment
07 Knowledge Transfer	08 Data Center

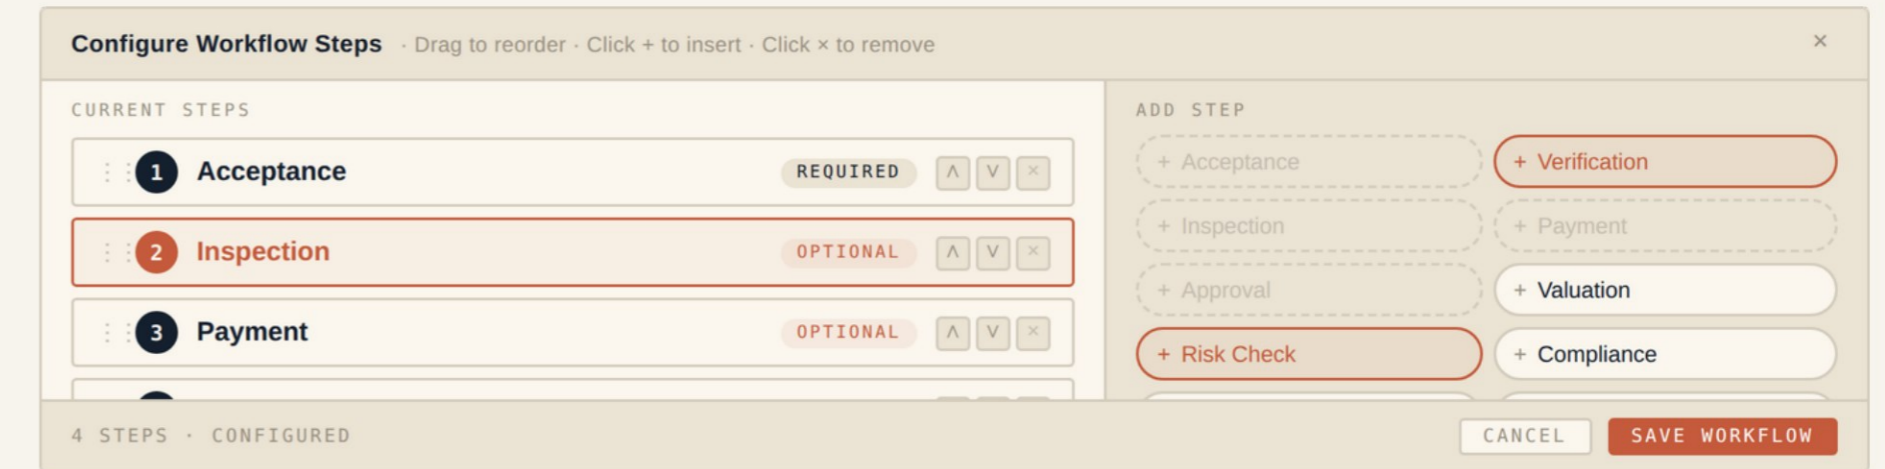

Dynamic Form

Drag fields from the library to build the form. When regulations change, officials update it themselves. No code required.

Dynamic Workflow

Drag to reorder. Click to add or remove steps. The approval chain fits the institution — not the other way around.

CAMCIS PROJECT

” Without a doubt, the most important professional experience of my life.

BY Séraphin Deffo Deffo- Director of IT Division Cameroon Customs

Cameroon Customs Management & Information System

+ 70%
in fiscal revenue.

The question wasn't whether the system would work. It was whether an institutional practice could transform. CAMCIS went 100% online from day one. In Cameroon, that wasn't a technical upgrade—it was a quest for reform.

Facing friction from stakeholders, internal doubts, and two decades of inertia. If failure occurs, is there a way back?

In the midst of the search for a way forward, CUIA presented the answer. Deeply understanding the unique context of Cameroon, the team delivered practical, actionable roadmaps. Every hard requirement, met. Every problem the local team hadn't named yet, anticipated. Not once did communication break down. This is what sustains a project of this magnitude: not just the technology, but the human factor.

Launch day at the Port of Douala was quiet. Some were still talking about going back.

The numbers proved them wrong. Day one: 7 declarations. Day two: over 100. Day six: daily revenue broke the old system's all-time record.

- 20%
in clearance time.

” It took years to convince people. The numbers did it in six days.

Next-Gen

TANCIS

Tanzania Integrated Customs System

Tanzania Revenue Authority was founded in 1996. For the first time in its history: twelve consecutive months above revenue target.

"TANCIS reduced direct contact between officers and taxpayers. Transparency improved. And with it, everything else."

Uledi Mussa Chairman · TRA Board

78 % revenue growth over four years.
TRA - 2021-2025

50 % increase in monthly customs revenue.
800 billion + 1.2 trillion TZS.

12 consecutive months above target. A first in TRA history.

IDRAS

Integrated Domestic Revenue Administration System

Beyond Customs. National Tax - One Unified Platform.

Tax follows a taxpayer through life. From business registration, filing, and payment to vehicle registration and driver's licensing — all from the same taxpayer. Yet not a single step had ever been connected.

IDRAS connects every step. For the first time, a taxpayer's complete history fits on one screen. What officers once searched for manually, the system now surfaces first.

+46 % of Registered Taxpayers

+94 % CDLS Revenue

+38 % CMVRS Revenue

Clearance, equipped with AI Processor

From simple declaration handling to AI-driven intelligence:
Empowering your decisions with data.

AI doesn't make the call.
It shows you where to look — before anyone else does.
